

## Key features

- runs on Sony Playstation 2
- 2 video layers
- 1 or 2 *players*
- transitions: addition, multiplication, blend, black chroma key and alpha channel filters
- geometry filters: mirror, travelling, glitch
- color filters: negative, extreme contrast, game boy palette colors
- controled by one or two simultaneous VJs
- output resolution: PAL or NTSC
- footage resolution: 320x240

## Requirements

- a regular Sony Playstation 2
- a *Swap Magic 3.6 plus* DVD
- a USB memory stick
- a PC with windows XP/Vista and Quicktime 7.5

## How does it work

To mix video footages with PS24VJ your video files has to be converted into the Kouky video format

file. Use the converter tool to convert quicktime movies or .png images sequences into a kouky video file. PS24VJ can load kouky files version 16.

Copy the "SWAPMAGIC" and "video" folders into the root of your USB memory stick. Copy your .k16 files into the "video" folder.

In order to access the USB port of your Playstation 2, you need to boot your console using the Swap Magic DVD.

Insert the Swap Magic DVD into your console. Insert your memory stick into the left USB port of the console.

Turn On your Playstation 2 and enjoy!

## How do get a copy

PS24VJ is shared with people who donated money for the project. There is no fixed amount for a donation: get in touch with me and tell me your price. I will accept serious offers. Donation are made by Paypal.

## Coming soon

- support for footage resolution of 640x480
- more video filters
